

ISGD7

7th International Symposium on Graphene Device
25 - 28 July, 2022 / WASHINGTON, D.C

Science and Applications of 2D Materials based Membranes

Prof. Rahul R. Nair

*National Graphene Institute and School of Chemical Engineering and Analytical Science,
University of Manchester, Manchester, UK*
rahul@manchester.ac.uk

Permeation through nanometre-pore materials has been attracting unwavering interest due to fundamental differences in governing mechanisms at macroscopic and molecular scales, the importance of water permeation in living systems, and relevance for filtration and separation techniques. Latest advances in the fabrication of artificial channels and membranes using two-dimensional (2D) materials have enabled the prospect of understanding the nanoscale and sub-nm scale permeation behaviour of water and ions extensively. In particular, graphene oxide (GO) membrane containing 2D graphene capillaries shows unique permeation properties such as ultrafast permeation of water and molecular sieving. In my talk, I will discuss our recent results on molecular and ionic permeation properties of GO and other 2D materials-based membranes and its prospect for several applications.
